## DETAILED ACTION

### *Election/Restrictions*

This application contains claims directed to the following patentably distinct species of the claimed invention:

Species I – single side printing apparatus

Species II – double sides printing apparatus

If **species I is elected**, it is further restricted into sub-species as follow for the distinct holes of the nozzles:

Species (A) – Figure 4

Species (B) – Figures 14-16

Species (C) – Figures 17, 18

Species (D) – Figures 19, 20

Species (E) – Figures 21, 22

Species (F) – Figures 23, 24

**Each** of the immediate above sub-species is further restricted as follow for the distinct drying means (**please note that the total sub-species here would be 12 because 6 sub-species above each sub divided into two other species**):

Species (1) – Figure 5

Art Unit: 2861

Species (2) – Figure 38

Each of the immediate above 12 sub-species is further restricted as follow for the distinct distant adjusting means (**please note that the total sub-species here would 36 because 12 sub-species above each sub divided into three other species**):

Species (i) – Figure 6

Species (ii) – Figure 11

Species (iii) – Figures 12, 13

Each of the immediate above 36 sub-species is further restricted as follow for the distinct ways of printing (**please note that the total sub-species here would 108 because 36 sub-species above each sub divided into three other species**):

Species (a) – Figures 7, 8

Species (b) – Figures 9, 10

Species (c) – Figures 25, 26

**If species II is elected**, it is further restricted into sub-species as follow for the distinct means for printing on both side of paper:

Species (A) – Figures 27-32

Species (B) – Figure 33

Species (C) – Figure 34

Species (D) – Figure 35

Art Unit: 2861

Species (E) – Figure 36

Species (F) – Figure 37

**Each** of the immediate above sub-species is further restricted as follow for the distinct drying means (**please note that the total sub-species here would be 36 because 6 sub-species above each sub divided into 6 other species**):

Species (1) – Figure 4

Species (2) – Figures 14-16

Species (3) – Figures 17, 18

Species (4) – Figures 19, 20

Species (5) – Figures 21, 22

Species (6) – Figures 23, 24

**Each** of the immediate above sub-species is further restricted as follow for the distinct drying means (**please note that the total sub-species here would be 72 because 36 sub-species above each sub divided into 2 other species**):

Species (i) – Figure 39

Species (ii) – Figure 40

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
